Applicazioni Web I

Web Applications I

Introduction to the course

Fulvio Corno, Luigi De Russis

Francesca Russo, Luca Scibetta, Alberto Monge Roffarello

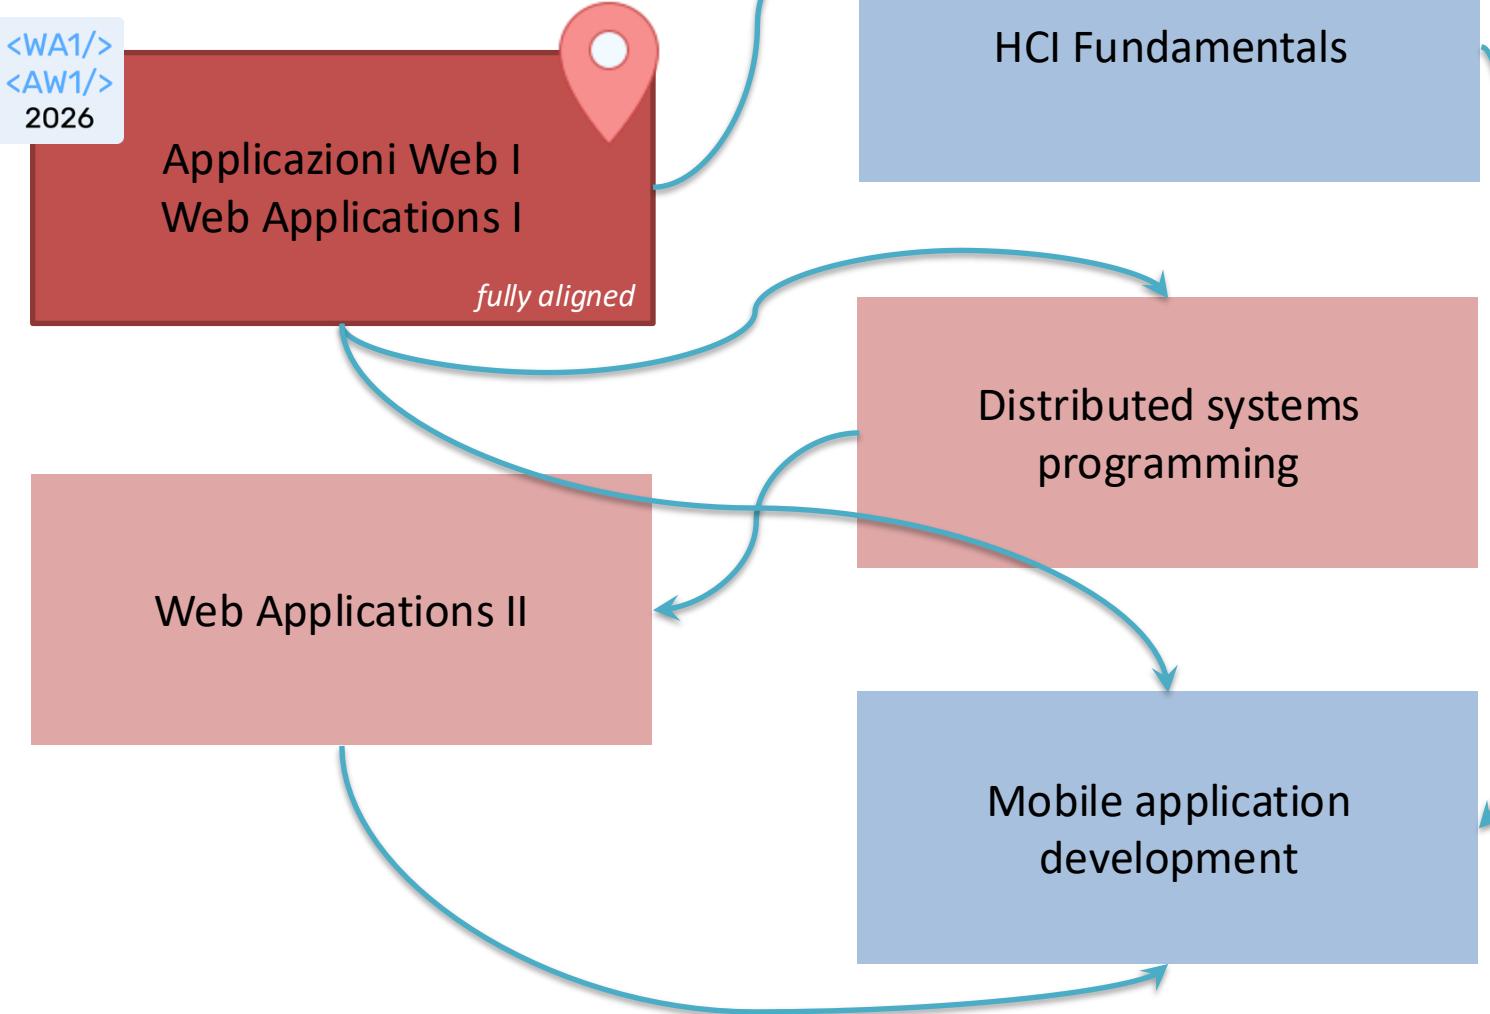

Goal

- Understanding web architectures
- Understanding and mastering web application design and development
- Gaining in-depth knowledge of the JavaScript language and ecosystem
- Becoming familiar with one of the most popular JavaScript frameworks (React)
- ...with special focus on the front-end

The Bigger Picture

- Web architecture
- JavaScript
- Browsers
- **Front-End** programming
- **Back-end** programming
- Scalability
- Large-scale

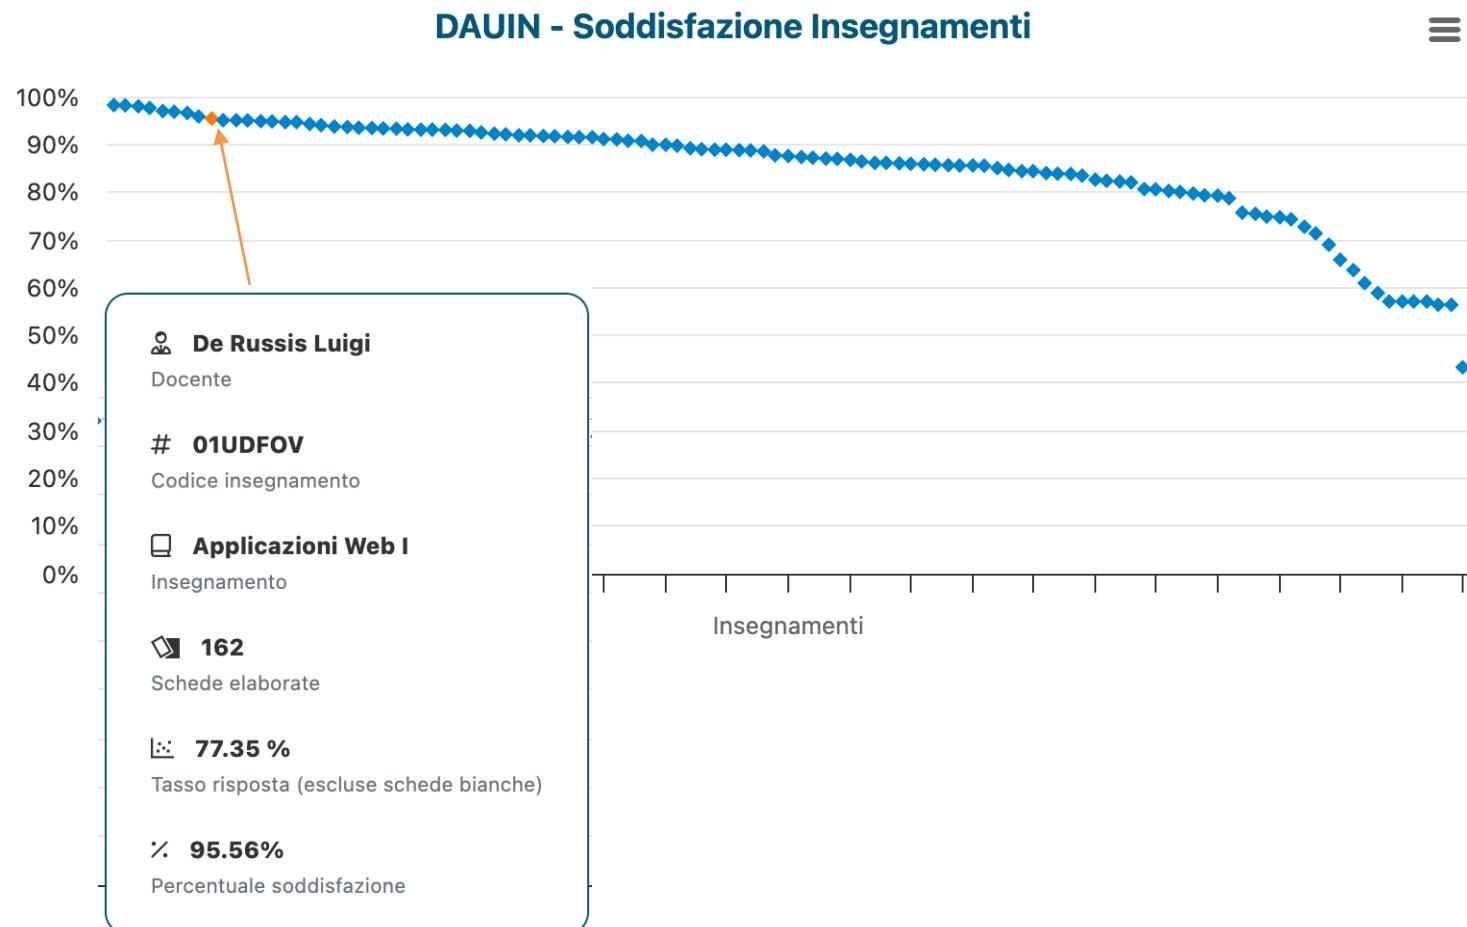

- Usability
- Interface design
- Human centered processes
- Distributed Architectures
- Protocols
- Foundations
- Mobile Front-End
- Mobile device programming

You are here

2025 End-of-course Questionnaire

- Relevant critiques*:
 - Labs should be more structured
 - Labs, in group and not mandatory, don't work
 - Not enough time to reason about each topic

* considered in planning this year's course

What We Will Learn

JavaScript as a language

- ECMAScript ES6
- Language constructs
- In-depth semantics
- Functional, Asynchronous, Modular, ...

The browser ecosystem

- HTML, CSS, page structure
- DOM
- Events, Properties, Handlers, APIs

Single Page Applications

- Server-side (bare minimum) with node
- API development
- Backend storage
- Sessions and Authentication

React framework

- Components, Properties, State
- JSX
- Hooks
- Router

Weeks and Calendar... At a Glance!

1. Intro to JS: basics, objects, functions
2. Intro to JS: async programming, callbacks, DB interaction + Intro to Web
3. Server-side with Express
4. HTML, CSS, Bootstrap
5. Intro to React + DOM
6. React: props and state
7. React: context, life cycle, forms
8. React router
9. Fetch and client-server interaction (in React)

Course Organization

- Classes
 - 3 h/week
 - Lectures + Exercises (*mixed*)
- Laboratories
 - 1.5 h/week
 - 2 Lab groups
 - From the 2nd week
- **Exception:** first week
 - Class instead of Lab

	MO	TU	WE	TH	FR
08:30		7i			
10:00		7i			
11:30					
13:00					
14:30	2P				
16:00	2P				
17:30					

Classes

- **In person**, in rooms with power outlets at the desks
 - bring your own computer, if possible, to follow the examples/exercises
- **Video-recorded** and made available soon after each class
 - *not* streamed live
- Once during the course, we will give you some materials to read/watch instead of a lecture (i.e., **readings**)
 - published well *in advance*

Laboratories

- From the 2nd week
- In rooms with power outlets at the desks
- Text online, some days in advance
- Exercises to be done during Lab hours
- Solution will be posted on GitHub
 - around 1 week after the end of each lab

Laboratories

- You will build a simple project during the labs
 - Step by step, following the course topics
- 2 slots:
 - Tuesday, 08:30-10:00, surnames: A-L
 - Tuesday, 10:00-11:30, surnames: M-Z

Exam Project Simulation

- Last two weeks of the course
 - All classes (all together), all lab hours (in the two slots)
- We will design and *start* implementing an exam-like project
 - Interactively, reasoning and discussing together

Learning Material

- Course website – <https://elite.polito.it/aw1>
 - Slides (in English)
 - Full schedule
 - Links and supplementary material
- Video lectures (screencasts)
 - YouTube - https://www.youtube.com/playlist?list=PLs7DWGc_wmwTtzrJfSixyNHE782vviLPK
 - Portale della Didattica
- GitHub - <https://github.com/polito-webapp1>
 - Examples, exercises, labs, exams, ...

The screenshot shows the course website for 'Applicazioni Web I (01UDF)'. The left sidebar lists various courses under 'Teaching' and 'Past Courses'. The main content area displays sections for 'Introduzione', 'Calendario', 'Risorse per lo sviluppo', and 'Esame'. A navigation bar at the top includes links for 'e-Lite', 'News', 'People', 'Research', 'Teaching', 'Thesis', and a dropdown menu.

Communications

- We will use **Telegram** for the main communications
 - among students, with teachers, etc.
- Announcements, official information, and Q&A
- Feel free to contact the teachers for feedback and questions
 - questions of general interest must be posted in the group, so that everybody can see the answer
- Link to the Telegram group: <https://t.me/+igCZnUygeTg0NzQ0>
- Emails can be an **alternative** for slower, more articulated, and private individual communications

Office Hours

- **Why?**
 - An opportunity to discuss issues or needs
 - To clarify information or ask questions on the course
 - To discuss academic or career goals (e.g., what to do next year, thesis)
 - To know more about certain topics
 - ...
- **When?**
 - **Wednesday 14:00-17:00** in my office; book a 30-min slot at:
<https://calendly.com/luigi-derussis/office-hours>
 - Also: on request, in person or remotely

Exam: Two Parts

1. Project development (up to 26 points)

- Individual, using GitHub
- Starting from shared requirements
- 20 days of time

2. Oral discussion (up to 4 points)

- individual and mandatory
- “live” correction and discussion of the submitted project
- when: the official exam day (or starting from that day)

Exam: Score and Process

- Project development + oral discussion: up to 30 points
- Evaluate the functionality, code quality and organization of the submitted project, as well as the student's understanding of their design choices and motivations
- Up to 2 extra points for students whose projects demonstrate a high quality and for the richness and precision of the answers during the discussion

Note: If it emerges that the student does not have mastery of the written code, the exam will be immediately canceled, without a numerical evaluation.

Full exam rules in the course website (under “Exams”)

Project Development

What

- Develop a web application using
 - React + JavaScript
 - Node + Express
 - SQLite
- According to a functional specification
 - published 20 days before each official exam date

How

- Individually (i.e., not in group)
- Using GitHub Classroom
 - commit + push your project
 - GitHub commits and usage are checked
- Teacher's Evaluation
 - running the application on the teacher's laptop
 - examining the code

Oral Discussion

Goals

- To ensure that each student developed the web application **by themselves**
- To evaluate how much the student can explain the **exact** behaviour of the code

Evaluation Criteria

- Theoretical and practical knowledge of the project design
- Theoretical and practical knowledge of the project code base
- Readiness and clarity in the replies

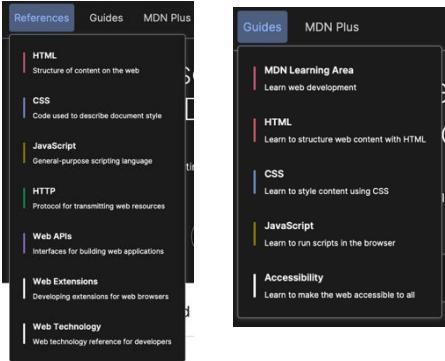

Using External Resources

- Getting help during the course and the exam project is normal: from documentation, Stack Overflow, peers, or AI tools.
- In the course, as in *professional practice*, what matters is your mastery of what you design and implement.
- **You are fully responsible for everything you create and submit**, and you must be able to:
 - Explain all parts of your implementation.
 - Justify your design choices.
 - Acknowledge and own its limitations.
- Submitting code you don't fully understand is unacceptable, regardless of its source.

Resources (fundamentals)

The screenshot shows the MDN homepage with a dark background. At the top, it says "Resources for Developers, by Developers". Below this, there's a section titled "Featured Articles" with four cards: "Introducing the CSS Cascade" (CSS), "<dialog>: The Dialog element" (HTML), "Asynchronous JavaScript" (JavaScript), and "Canvas tutorial" (Web APIs). The "JavaScript" card has a small error in the text: "In this module, we take a look at asynchronous JavaScript, why it is important, and how it can be used to effectively handle potential...".

Mozilla Developer Network
(MDN)
<https://developer.mozilla.org/>

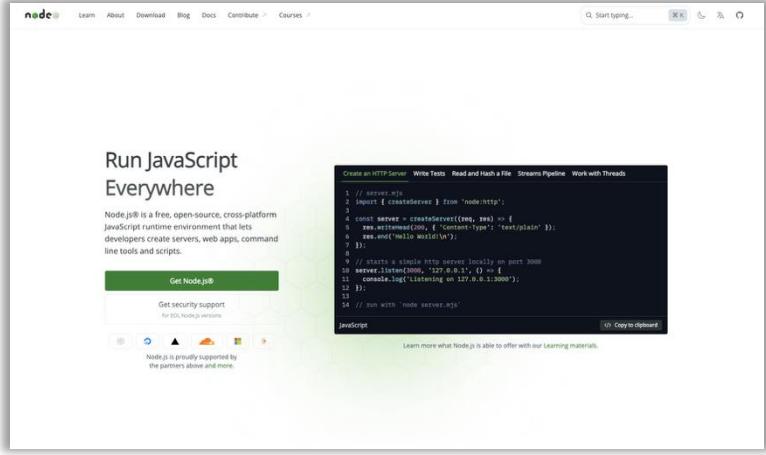

The screenshot shows the React library homepage. It features a large blue atom icon and the word "React". Below this, it says "The library for web and native user interfaces". There are two buttons: "Learn React" and "API Reference". The main content area has a large heading "Create user interfaces from components" and a subtext "React lets you build user interfaces out of individual pieces called components."
